---

## INTRODUCTION

Be sure is it not the disk that is faulty before replacing the disk drive. If you are having anyother problems with this device check the troubleshooting page [here](#).

---

### TOOLS:

- [Phillips #1 Screwdriver](#) (1)
-

## Step 1 — Disk Drive

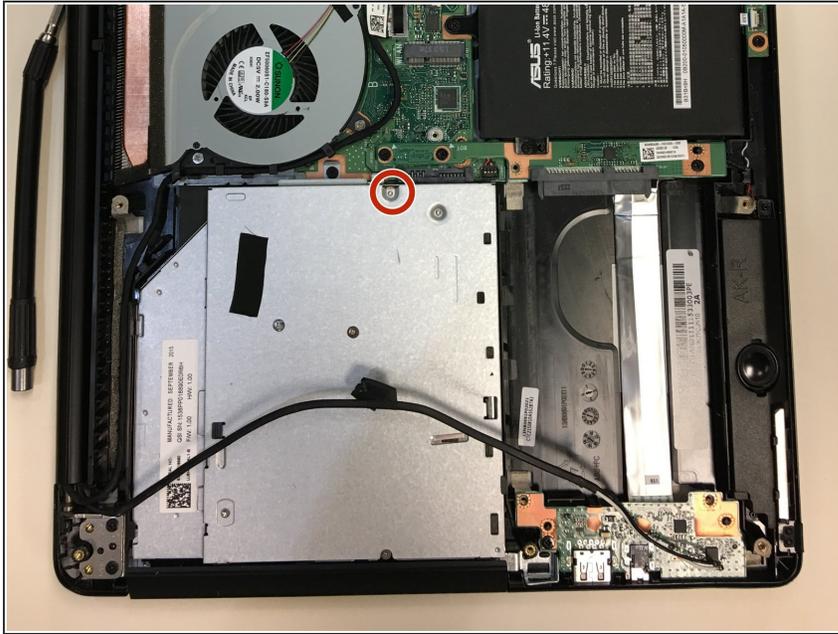

- Start by removing the 10 screws on the back of the laptop with a Phillips head 1 screw driver.
- Remove back cover.

## Step 2

- the battery must be removed so there is no power running to the disk drive. Follow the battery replacement guide [here](#).

### Step 3

- Unscrew the one screw on the disk drive with a Philips head screw driver 1.

### Step 4

- Slowly slide out the disk drive.

To reassemble your device, follow these instructions in reverse order.
