## Step 1 — Keyboard Panel

- Flip the Chromebook over so that the underside is facing up.

- Using the Phillips PH #000 screwdriver, remove the 11 "4mm" screws on the back of the device.
Step 2

- Wedge the plastic opening tool between the bottom cover of the laptop and the keyboard panel.

- Apply pressure and move the plastic opening tool around the border of the laptop until it pops out.

Step 3

- Once the keyboard panel pops out, slowly move it upwards so that the keyboard connection is visible.

- Remove the keyboard connection from the motherboard by pulling it outwards from the connector.
Step 4 — Display

- Remove the hinge protector by using the plastic opening tool to gently lift it up. It should come up easily.

Step 5

- Using the plastic opening tool, separate the display cover bracket from the back of the display. Start from the top.

Step 6

- Remove the (4) four "4mm" screws in each corner that hold the display using the Phillips #000 screwdriver.
