## Step 3

- Remove all 11 (4mm) screws with the JIS #000 screwdriver

- ⓘ There are three screws on top, three above the battery, one next to the battery, one under the battery and three at the bottom of the phone.

## Step 4

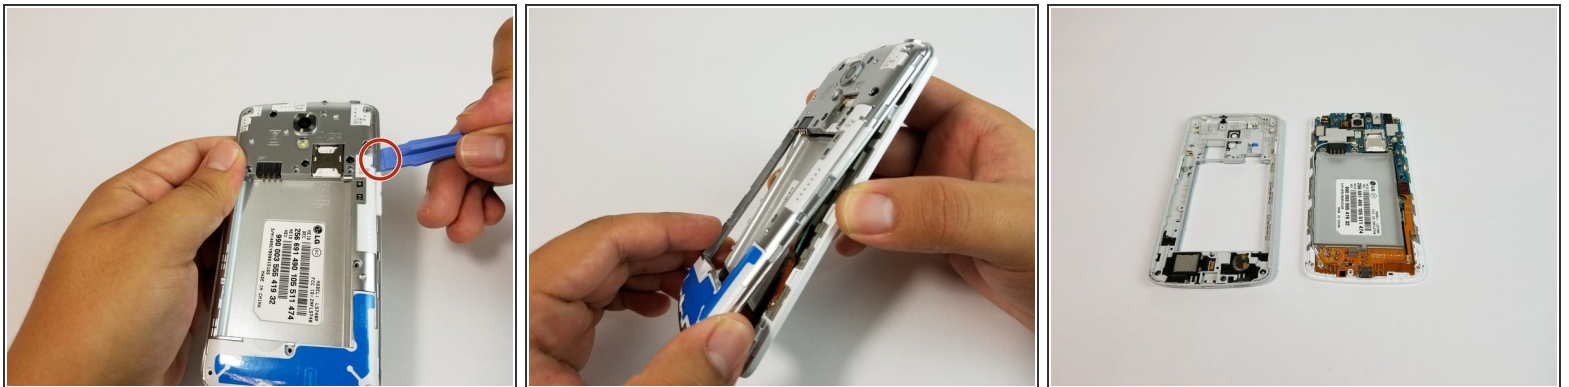

- Use the plastic opening tool to remove the back housing from the frame of the phone.

This document was generated on 2020-11-28 06:05:59 AM (MST).

## Step 5

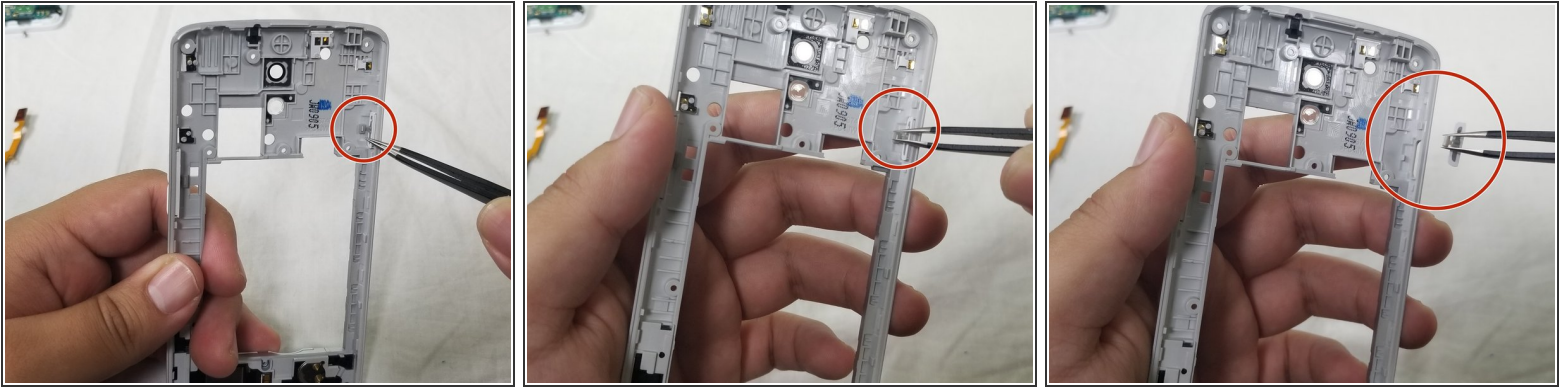

- Use the precision tweezers set to gently lift the rubber tab off its anchor.

- Then push the power button through the cutout to remove completely.

To reassemble your device, follow these instructions in reverse order.
